Ann Mearns, Church St. Nov 25.

A very large cicatrix on the upper part of the breast, surrounded by ulcerating pustules - a hole in the soft breast, towards the right side - without any white edge, and a depression or ulcer near it to the left (see drawing) somewhat healed, no pain - she had 4 children, some years ago and has taken mercury - she says the ulceration of the breast was healed by a great deal of sucking & abstraction to her breasts - no touch nor more at any time in her life =

Pat. Giovanni, Oct 20 -
resides N-1 Stoney Boston -

A very large ulcer on under surface of penis, with necrotic granulation. The ulcer has an elevated edge, somewhat cratered in some places, a whitish on the inner side of it, the surface is a dirty ash color - it is not granulating much - has sent during pain, as if there was a sword

has had this ulcer 7 weeks - it would 3/4 appear as if, from his report, it began by a puncture - has a swelling in the groin - has an eruption of the measles kind a little elevated, faintly on the neck - it is very faint. There is a sore with edges of the isthmus of the paucers, has been in his shoulder - says he has not taken any mercury - did not observe the eruption; until a few days ago - has lately had a few head-aches - ^{under purple & faint (see drawing) was taken by Mr. Walker into Richmond when I went there.}

15

Peter Campbell.

The punctulated edge has almost entirely disappeared - The arsenic ointment has been applied 3 times - The tenderness is much diminished.

When he was taking the Cal. pills before, his mouth was sore very highly so - The ulcer in the groin was nearly healed.

He was dressed with Cal. ointment, Cal. ointment, and the P. Cal. & he did on down. (138)

Mary Ruty.

This woman took away her child early this morning - I saw the child yesterday, it had much indigestion of stomach, but the appearance on the skin, & the tubercle on the thighs had got like - the face was more shrunken.

Nicholas Hart.

Fremont 14 days.
