

134 him an herpetic appearance -  
Had an ulcer on his penis, which  
has left a cicatrix with an elevated  
edge - last winter - took no medicine  
for it - never had any <sup>venereal</sup> other dis-  
ease - had some time after the con-  
junctival spots began to appear,  
which he calls blood boils, & he had  
at the same time seven pearly in  
his back - some of these blood  
boils have left a mark, which  
are white in the center - (135)

August 9. mother of a <sup>wanted</sup> putrid child  
Elizabeth Herbert - Aged 26, residing at  
Lancaster Lane, New York - married - has  
had 2 children - one now, and the other  
two years - The last had 3 months - did  
not live to see 3 months

This is the mother of the child of which  
a drawing was made, and which is  
small and putrid

The mother of the child which is  
large, and from what the skin  
she peeled off, has admitted that  
her husband was diseased when  
she married, that he had given  
a disease to her, & that she is the  
mother of several diseased  
children -

Plata, large tubercles -  
The mother of the spotted child  
denied that she had any disease,  
yet gives such an account of  
her health, as leaves but little  
doubt that she has had trans-  
mission of virus - The child lived  
only for about half an hour  
after birth. The spots were ele-  
vated, like in the middle - on the  
drawing there are marks of her  
infestation -

135 Peter Campbell  
The solut. Arsen. applied to  
the edge of ulcer yesterday - it pro-  
duced much pain at the time,  
and continued for half an  
hour, when it became easier  
than it had been - The pain  
returned in the evening, though  
not so considerable - The  
ulcer looks better. The edge is  
less punctulated, bluish, &  
the pearly horn are lighter -  
The solut. again applied, &  
did not seem to work pain -  
The spots in his groin are  
diminishing in - (below)

Mary King  
This woman left the Richmond  
after she had taken Fowler's  
solution for a fortnight, &  
used some warm baths - Mr.  
Walter thought that the legs turned  
were more hard, and that the smaller  
ones had decreased - when she  
left the hospital the fingers  
which had shrunk, & the frame  
the tubercles which were cut re-  
mained in full growth -

12th  
Campbell  
The punctulated appearance  
has gone, is right at the up-  
per part. The pain last night  
up - The solution is in ap-  
plication - (137)
