

James Murphy.

Like the ulcer healing rapidly - and some parts healed - from continues better -  
Cauterized with applied - the one at per-  
num as well as the others could with  
lymph. - There are two fresh ulcers,  
at the place where the skin forms  
the ulcers before - These have  
been left to themselves - They are  
excruciated, white, with a brown base.  
Cauterized fairly applied. (12)

John Ryley.

The ulcer on glans is covered by a hard  
black and charred crust - there is no  
hair, nor was there any hair in it -  
The ulcers at the corona are all white,  
what he says was healed by the le-  
tion - they have a red margin - to be  
let alone today - Wash was probably  
too strong (12)

Carl.

The skin about is white, the ulcer  
excruciated, white, and has a healthy  
lymph on it - Let. Phlegm (12)

Pat. Lowery.

Surfacer also covered by slough -  
L. Lard (12)

Mc. Kenna.

No inflow expected - surfacer  
looks cleaner, & edge more rounded,  
but it has a brown color -  
it had, and was purple, fresh cauteri-  
zation - L. Lard

Lynch

Has taken 10 P. L. Cal. e. Opi -  
The condition is drying, and no prob-  
ably an early ant - the areola  
is left diffuse - complete of healing.

John Smith.

Ulcer contracting very much - and en-  
tire forming - from well cauteri-  
zation fully (15)

Tr. Dunsby.

The ulcer is improved - surfacer is  
wider - says his pains are more  
lessened, and the surface of the  
lewis more turned (13)

31

Pat. Connor.

Surfacer much as it was, dangerous  
effusion at first edge increased - p -  
100 - Was told to amount of 123 - 10  
leukos applied - & M. L. says -  
has been little, slight well - foot no sound  
P. now only 100, & M. L. says it  
was 90, when he first saw him.

Peter Campbell.

Wound healing rapidly - granulation  
in middle very high - cauteri-  
zation to one part of edge, water Eph -  
The promi healed, has been using  
Solat. Sulfur. Carb. M. L. months  
near well. (13)

✓ Michael Hobbs, Aet 100,  
resides at Lewis 1st N. 8.

Several round & oval patches on  
different parts of the surfacer, have  
healed on the lower limb - he  
says, the scales have a slight yellow-  
bluish to white - in some the color  
is very deep purple - but the re-  
markable part of this row, arises  
from these spots on his feet  
healing into the purpura state  
There is one particularly large  
purpura on the left foot at the
