

He has lost his plans hair. His throat is full of exanthema. He has a prominent rent on the forehead among the hair. It is yellow, and the hair appears depigmented. The rent forms a portion of a circle about  $2\frac{1}{2}$  inches in diameter. Has been dressed 3 times - has taken mercury twice - had one month, but only for a short time - has spent during a night - His nose was once inward before it became affected outside. Has not used any mercury since his face broke out, about a year and half ago. He married 4 years, has one healthy child. Has gained any disease to his wife. Was in the Richmond for 10 weeks - but nothing but yellow work which healed up the nose - took no mercury since the nose inwardly became affected. The yellow work healed up the nose externally - The skin at the angle of his nose & cheek is tuberculated. His eyes are of a very blue color - he has fine hair.

Andrew Dunn, Oct 10, 79  
 Under Mr. Thos S. Parents  
 Corvot No. 2 - a Taylor -  
 A cucumber ulcer on the sitting  
 bent of left hip - cucumber colored.  
 of the size of a half crown nearly  
 level base, very gently ex everted.  
 border level and everted - a rent  
 on the other hip, near the sitting  
 part, level base. (see drawing)  
 an ulcer in left groin, ex everted,  
 tubercular edges, common color.  
 Her Phymosis, and discharge - It  
 is six months since the disease  
 commenced in Thos. The son  
 on the left commenced in the a  
 lymph - Has been taking mercury  
 and horsewoods.

### John McFloughlin.

The large chancre is shrinking in  
 size, but its character is the  
 same - except that it appears  
 a little redder. The penis is  
 tender and feebly, & the phymosis  
 persists. (p. 91)

### Wm. P. Pomeroy,

He appears to have extended. The base  
 is become more hard. at a distance  
 it looks very like an aneurysm.  
 Some of the parasternalia in the  
 middle look tubercular (p. 92)

### Saml. Dorland

Two tumors - have formed in  
 the groin - over the former one -  
 penis is enlarged -
