

6
eye, and a right ad on - then on
the section has a sudden character,
but are not so white, and one is a
little yellow - there is discharge from
origin of pupine, and he says the
concurrent began about 6 weeks
ago with ulceration on inner surface
of pupine - Ment. And. (11)

8.² Long. Oct. 22. unives 10.
5 May Lam, a smaller in cattle -
light eye much inflamed - a streak of
lymph deposited between the cornea
and iris at the ap.
he pupil - slightly ad - the vessels of the
sclerotic at this point slightly more
numerous - the vessels of iris varicose -
iris peculiar, pupil contracted - haze
cornea, most hazy at pupil and
round circumference - vasculature
beaten in sclerotic as it ap -
he aches cornea - great lachrymal
discharge - intolerance of light - can
not bear the candle at night - can
not distinguish more than light - no
flushing of face - has considerable
pus in the bag of eye and in
his temples - pus is most severe
at night - after he has drooped - does
not sleep for two or three hours
after going to bed - has on the glans
the creases of two or three small
ulcers, and a slight excretion at
the origin of pupine - there is the
remains of a pupule - particular
eruption on his arms in particular.
pus in his shoulder and on of his
arms - I saw this man some weeks
ago in Smithfield with a full crop
of pupule on his face - the left eye
soon after became attended, and
when it got over the right eye

became affected. Before the pupule
eruption appeared he had been in
Paris St. for pus - Had one
venereal eruption three years ago,
and a second 8 months ago - his
thought he says was more soon he
took something in powder from a man
for the first disease. This cured it
and him - The second disease was
allowed to run its course - has been
taking mercury from time to time in an
irregular way for some time, and
finding him not improving I have sent
him into hospital - the drawing of eye
(9)

James Southwold or Sutherland

- See Vol. 2. P. 112.
I saw this woman yesterday - she was
complaining much of pus - there
appeared pus in her right eye -
the spots on the surface appeared in
pink color and not grey - she
had been that day put on bark - she
had a very much pain - she left
the hospital this day - I have heard
subsequently that she had recovered -

McJorvan, (Vol. 2. P. 146)

I applied the Solut. arsen. yesterday -
It gave him considerable pain for
two hours, but afterwards it was
less painful - The sloughs have appeared
today to be clearer than it was -
I intend to repeat the Solut. arsen. on
tomorrow - It is taken internally.

Wednesday, May 12, 1830 -

From Foster,

The ulcer has extended, that on the pre-
more excavated. The surface of glans
is ~~large~~ - The surface of glans
about is perforated, and not so dark as
it was yesterday - The surface is ^{palate} ~~exposed~~
covered with a peculiar yellow
