

much of course of throat & of face -  
on looking carefully into his throat,  
there is a faint appearance of the  
lumpy surface with a faint red  
color on the front surface of the  
posterior arches - The hairs are  
washed at night - Has put wash-  
cup in his hands - The hairs  
are perceptibly seen in his  
shoulders, neck, and hands -  
Wht. Acid. (33)

John Gay.

The white appearance of the throat  
appears now to occupy the whole  
of the interior surface of the dis-  
coid part and to be decidedly ele-  
vated. on the left toward throat ap-  
pears to be an excavated ulcer -  
the eruption is deep & remarkable.  
The chancre on under surface of  
penis is deepened in the middle,  
& has rounded edges about it -  
Wht. Acid. (67)

Mrs Lynch,

The ulcers are much the same. They  
heal. The tumor in the upper &  
lower part of the thigh - Caution of -  
blind to the two upper chancres -  
Wht. Acid. the same. (23)

Meredith. (p)

The ulcers continue to decrease in size.  
The thin cuticle is peeling over them.  
New dark venous elevated continues to  
be drawing made today.

McJorran

The left of the mouth seems to be laid  
open an ulcer on the outside and red  
on the inside - The ulcer appears to be  
extensive - The unusual solution has  
not made him sick - Wht. (107)

John Kelly.

The aspect of the throat has improved.  
The white parietal appearance on the  
glans has become less striking, the sur-  
face of the ulcer appears to be melting  
down the white and brown parts, &  
there are not extending to other parts.  
The medicine operated, but not  
very copiously. He has had less pain.  
Wht. (22)  
Wht. Macromer - simple dressing.

Joseph Roock.

The tumor in the upper part of the penis  
has been two days ago. Is characterizing very  
much - a drawing has been made of the  
eruption - He appears that it is his thin-  
ner but the eruption came before the  
the present ulcers in penis and tumor in  
penis, and about the same time of  
former tumor - Says his penis can  
scarcely stand to stand, and that he has  
been for many years that a trifling  
irritation would put into a son - several  
of the spots observable have been  
the result of urging. He says his skin  
is itching, and there are many dark  
spots which spread & abundant blood -  
(25)

John.

The aspect of the eye much improved. It  
is remarkably observable could come. The  
lobes of the eye have been removed, but not  
that part the corner for the effect of it  
small part of that appears more vascular.  
The vascular surface could come is very -
