

The under of thigh, which looks
like one of them at aneur.
His throat is slightly raw, inflamed
looking, and his tonsils are a little
enlarged. There is a spot on the
inner surface of under lip. It
looks like one of the spots at aneur.
The lower lip has a tendency to
crack. "No fever" - does not
feel himself in good health.
"He is dead and heavy coming
right" - There is a penis and
bulbous at the lower end ~~first~~
part of left tibia. There is a
spot on the dorsum of penis, which the
male has the character of the large seal.
Then an other shot which our security
has been elevated, ad, wound, and
broken any scales. - dead. (p. 35)

P. Dougherty.

This man had ceased to attend for some
days - on looking him out I found that
he had applied to Medical Hall, (Haller)
and had got a red patch and received
outment to dress it with. He had been
so acting for some days. The appear-
ance an all-over the changed. The
swelling is less, the white appearance or ex-
position has decreased. The surface
is of a fine red - smooth, from the
surface which was surrounded by the ring
is still so surrounded, but the ring is not so
prominent, and this surface is elevated, less
tenderly at the middle. The appearance on
the penis has become more prominent. &
the middle of it has become more
depressed. In drawing - long at (32)

The white appearance has decreased. There are
lower a number of minute white spots on
flans, outside lines of ulceration. These white
spots appear somewhat like minute mic-
hant characters. The one part of the sur-
face of flans, and at ~~an~~ ^{very} ~~part~~ ^{to} of the
ad, then would appear to be granular
tiny shooting up. The color of the flans is
still a dark crimson. The penis the lip is
still very considerable on exposure. Perigut-
in drawing much today. (31)

Christopher Brown. (Vol. 2: P. 22)

This person was a patient formerly. (see his
case, Vol. 1.) He has an ulcer on right tibia.
The surface, where which it is raised is ten-
der. The surface of ulcer is excavated slightly,
and the circumference is hard looking, the middle
more dark. He has also a minute, white,
excavated ulcer on the origin of peroneus.
He looks pale and ill - and complains
of heart in his heart. It is probable that
there on penis is the result of a fresh
infection; and the heart and appearance,
in the throat, the consequence of powder.
Caustic applied to chemurg dead. (32)

Wednesday, May 19, 1880,

James King. Vol 2 - P. 142

The tumor discharges very
much. The hole appears
to be nearly filled with
a pulpy granulation.
There is considerable swelling,
and the son on penis. I look (36)

Matthew Phipps -

has minute pustules on
every part, but of a (37)
smaller size - ch. an
